

# Client–Assistant Personality Matching

Which assistant personality best fits which client. The model is **complementary fit** — the strongest assistant covers the client's blind spots rather than mirroring their strengths — applied in two layers: the archetype family grid first, then Big Five (OCEAN) trait rules to refine. Each family carries its signature **gemstone**.

[Open the Pairing Explorer →](#)

Layer 1 · 64 archetypes → 8 gemstone families

Layer 2 · 243 OCEAN profiles

4,096 pairings

v1 — validate against outcomes

## THE CORE IDEA

### Drivers pair with Executors

Every archetype rolls up to one of eight trait families, each with its own gemstone. Four are **drivers** (they set direction and create momentum); four are **executors** (they deliver, stabilize, and care for people). In a client→assistant hierarchy, the reliable pattern is a driver client matched to an executor assistant — and vice-versa. Two drivers contest the wheel; two of the same family amplify a shared blind spot.

#### DRIVERS — SET DIRECTION

-  **Commander** Citrine · INFLUENCE
-  **Inspirer** Aquamarine · SOCIABILITY
-  **Catalyst** Topaz · INTENSITY
-  **Visionary** Garnet · ABSTRACTION

complement

#### EXECUTORS — DELIVER & STABILIZE

-  **Analyzer** Amethyst · PRECISION
-  **Stabilizer** Tourmaline · CONSISTENCY
-  **Counselor** Opal · PROSOCIAL
-  **Intuitive** Onyx · EMOTIONAL RESONANCE

## THE GEMSTONE SYSTEM

### 8 base gems → 64 hybrid archetypes

Each archetype is a **hybrid gemstone**. The **primary** trait sets the base gem and family; the **secondary** trait fuses a second gem inside it — that fusion *is* the archetype. An **Apex** archetype (no strong secondary) stays a single pure gem. Eight base gems combine into all 64.

## LAYER 1

## Archetype family compatibility

The family-level overview behind the explorer. Read a **client** down the left, an **assistant** across the top; hover any cell for the reasoning. The 64 archetypes inherit their family's rating, then the secondary gem nudges it — which is exactly what the explorer above computes.

| Client ↓ / Assistant →   | Commander<br>Citrine | Inspirer<br>Aquamarine | Catalyst<br>Topaz | Visionary<br>Garnet | Analyzer<br>Amethyst | Stabilizer<br>Tourmaline | Counselor<br>Opal | Intuitive<br>Onyx |
|--------------------------|----------------------|------------------------|-------------------|---------------------|----------------------|--------------------------|-------------------|-------------------|
| Commander<br>Citrine     | Friction             | Workable               | Friction          | Friction            | Ideal                | Strong                   | Strong            | Workable          |

| Analyzer<br>Amethyst     | Workable             | Friction               | Workable          | Strong              | Workable             | Ideal                    | Strong            | Friction          |
| Stabilizer<br>Tourmaline | Friction             | Strong                 | Friction          | Friction            | Ideal                | Workable                 | Strong            | Workable          |
| Counselor<br>Opal        | Strong               | Workable               | Workable          | Workable            | Ideal                | Strong                   | Friction          | Friction          |
| Intuitive<br>Onyx        | Friction             | Workable               | Friction          | Workable            | Strong               | Ideal                    | Strong            | Workable          |

Ideal — covers the gap   Strong — solid coverage   Workable — neutral

Friction — clashes / shared blind spot

Hover a cell to see why that client–assistant pairing lands where it does.

## FAMILY REFERENCE

# The eight gemstone families

Each family as a **client**: its gemstone, what it contributes, the gap an assistant must cover, and the recommended assistant families.

## Commander

**Citrine** **DRIVER** INFLUENCE

**Brings:** decisive drive, crisis command, and ownership of outcomes.

**Needs an assistant who:** covers flawless follow-through on the process and detail they skip.

Ideal → Analyzer (Amethyst)

Strong → Stabilizer (Tourmaline), Counselor (Opal)

Avoid → Commander (Citrine), Catalyst (Topaz), Visionary (Garnet)

## Inspirer

**Aquamarine** **DRIVER** SOCIABILITY

**Brings:** team energy, morale, and relational glue.

**Needs an assistant who:** covers someone to hold the line on tasks and detail while they work the room.

Ideal → Analyzer (Amethyst)

Strong → Stabilizer (Tourmaline), Intuitive (Onyx)

Avoid → Commander (Citrine), Catalyst (Topaz)

## Catalyst

**Topaz** **DRIVER** INTENSITY

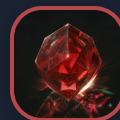

**Brings:** velocity, rapid prototyping, and relentless momentum.

**Needs an assistant who:** covers a structural integrator to turn fast ideas into shippable systems.

Ideal → Stabilizer (Tourmaline)

Strong → Analyzer (Amethyst), Counselor (Opal)

Avoid → Catalyst (Topaz), Inspirer (Aquamarine)

## Visionary

**Garnet** **DRIVER** ABSTRACTION

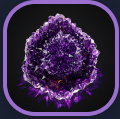

**Brings:** strategic foresight, contingency planning, and clever pathfinding.

**Needs an assistant who:** covers daily-operations ownership they get bored maintaining.

Ideal → Stabilizer (Tourmaline)

Strong → Analyzer (Amethyst), Counselor (Opal)

Avoid → Visionary (Garnet), Catalyst (Topaz)

## Analyzer

Amethyst EXECUTOR PRECISION

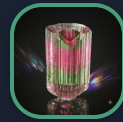

**Brings:** rigorous detail, data validation, and quality control.

**Needs an assistant who:** covers warmth and people-read to offset a low-empathy default.

Ideal → Stabilizer (Tourmaline)

Strong → Counselor (Opal), Visionary (Garnet)

Avoid → Intuitive (Onyx), Inspirer (Aquamarine)

## Stabilizer

Tourmaline EXECUTOR

CONSISTENCY

**Brings:** operational bedrock, reliable systems, and follow-through.

**Needs an assistant who:** covers a spark of initiative and change they are slow to start.

Ideal → Analyzer (Amethyst)

Strong → Counselor (Opal), Inspirer (Aquamarine)

Avoid → Catalyst (Topaz), Commander (Citrine), Visionary (Garnet)

## Counselor

Opal EXECUTOR PROSOCIAL

**Brings:** empathy, loyalty, and conflict mediation.

**Needs an assistant who:** covers structure and boundaries they will not enforce for themselves.

Ideal → Analyzer (Amethyst)

Strong → Stabilizer (Tourmaline), Commander (Citrine)

Avoid → Counselor (Opal), Intuitive (Onyx)

## Intuitive

Onyx EXECUTOR

EMOTIONAL RESONANCE

**Brings:** instinctive people-read and quiet, high-trust anticipation.

**Needs an assistant who:** covers grounding structure to steady their moods and focus.

Ideal → Stabilizer (Tourmaline)

Strong → Analyzer (Amethyst), Counselor (Opal)

Avoid → Catalyst (Topaz), Commander (Citrine)

### LAYER 2

## OCEAN trait refinement

Once the family pairing is set, tune with the Big Five. Two traits are **complementary** (the assistant covers), two **match** (align styles), one **adapts** within a band. These rules are drawn straight from the "ideal subordinate" guidance stored on each of the 243 OCEAN outcomes.

| TRAIT    | RULE                                                                   | WHY                                                                                                                                                                                                                                                                                 | TARGET                                 |
|----------|------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| <b>C</b> | <b>Conscientiousness</b><br><b>COMPLEMENT</b><br>— assistant runs High | The single biggest lever. Whatever the client scores, the assistant should be High-C: the "structural integrator" who turns intent into reliable, shipped work. The lift is largest when the <b>client is Low-C</b> (visionary/messy) and the assistant supplies all the structure. | assistant C $\geq$ client C; aim High  |
| <b>N</b> | <b>Neuroticism</b><br><b>COMPLEMENT</b><br>— assistant runs Low        | Stability is a universal assistant asset. A Low-N assistant absorbs pressure and creates psychological safety. Critical when the <b>client is High-N</b> (vigilant/anxious): they need a calm anchor, never a second worrier.                                                       | assistant N $\leq$ client N; aim Low   |
| <b>E</b> | <b>Extraversion</b><br><b>MATCH</b> — sync the energy                  | High-E clients want a vocal, collaborative brainstorming partner; Low-E clients want quiet, asynchronous check-ins and protected focus. A mismatch reads as social friction on both sides.                                                                                          | assistant E $\approx$ client E         |
| <b>A</b> | <b>Agreeableness</b><br><b>MATCH</b> — sync the conflict style         | High-A clients want an empathetic, low-ego collaborator; Low-A clients want a direct operator who defends ideas in friction-heavy debate. Match this axis so their communication values align.                                                                                      | assistant A $\approx$ client A         |
| <b>O</b> | <b>Openness</b> <b>ADAPT</b> — within one band                         | Keep the assistant within $\pm 1$ band of the client. For a High-O client who loves radical pivots, the assistant should be adaptable (Med-High O) <i>and</i> High-C so novelty still ships. Low-O clients want a playbook-loyal operator.                                          | assistant O within $\pm 1$ of client O |

## PUTTING IT TOGETHER

# How to score a pairing

## CLIENT

O:High • C:Low • E:High • A:Low •  
N:High

**The Pioneer  
Catalyst**

**Topaz +  
Garnet**

Driver. Fast, visionary, low structure, runs hot.

## BEST-FIT ASSISTANT

O:Med-High • C:High • E:High • A:Low •  
N:Low

**Stabilizer** **Tourmaline**

Executor who ships the vision and stays calm.

1. **Family (Layer 1):** Catalyst client → **Stabilizer** is Ideal (the "structural integrator"); Analyzer is Strong. Avoid another Catalyst.
2. **C – complement:** client is Low-C, so the assistant **must be High-C** — this is the biggest single fit driver.
3. **N – complement:** client is High-N, so the assistant should be **Low-N** to anchor them.
4. **E & A – match:** client is High-E / Low-A → assistant High-E, Low-A, so energy and direct conflict-style align.
5. **O – adapt:** client is High-O → assistant Med-High-O so they keep pace with pivots without adding chaos.

**OpenKeyID Client–Assistant Matching Guide – v1.** Layer 1 grid derived from the operational dynamics of the 64 trait-list archetypes; Layer 2 rules derived from the ideal-manager / ideal-subordinate fields on the 243 Big Five outcomes. The Pairing Explorer scores every pairing as  $3 \times (\text{primary} \leftrightarrow \text{primary}) + (\text{primary} \leftrightarrow \text{secondary}) + (\text{secondary} \leftrightarrow \text{primary}) + \frac{1}{2}(\text{secondary} \leftrightarrow \text{secondary})$ . Gemstone artwork pulled from the live OpenKeyID outcome records. A design framework to validate against real placement outcomes before wiring it into the app — ratings are directional (client→assistant), not symmetric.
